Subject: A Revit® tool to make your job easier; Greenheck Revit add-in for eCAPS®

We are pleased to advise you that Greenheck has created a valuable software tool for your use that will save you significant time when designing HVAC systems with Greenheck equipment.

The tool is called the eCAPS Bridge for Revit and it results in quicker, easier access to Greenheck product content while working in Revit.

This add-in allows product selection, configured (not generic) Revit models, and schedule data all within the Revit program. The first release of this eCAPS bridge is for fan selections only, however more Greenheck products will be added on a regular basis with frequent updates.

You no longer have to repeatedly leave the Revit program to get Greenheck product information, which significantly reduces design effort and time!

Please see the attached flyer to this email that explains how you can download the eCAPS Bridge for Revit to start making your design effort easier!

As always advise if we can be of assistance and thank you for the opportunity to be of service.

Kind regards,

Your Greenheck Rep
