# **HVAC University Learning Center**

*Driving Ventilation Knowledge™*

Greenheck's HVAC University Learning Center is hitting the road to deliver **warehouse ventilation solutions to you.**

A warehouse or distribution center is not your typical building—large doors and loading bays that are often open in any weather; gas-powered vehicles operating inside; very high ceilings; few walls; and the need for clean comfortable office spaces. Moving, clarifying and treating air requires a well-integrated multifaceted ventilation system.

**For more information, contact your nearby Greenheck representative.**

**Greenheck's HVAC University Mobile Learning Center** contains hands-on, interactive demonstrations of many products that go into warehouse ventilation. Engineers, building managers, and contractors all enjoy seeing these innovative products up close and at a convenient location. Find out how it works. Talk to our knowledgeable product experts. Train your staff.

 **GREENHECK**  
*Building Value in Air.*

## **FOR YOUR SAFETY:**

- Outdoor learning environment allows for social distancing.
- Displays and touch points are disinfected between visits.
- Drivers and presenters follow all state and local guidelines regarding masking.

# Featured Products

Achieve your potential.

## HVLS Fans

Ideal for destratification, comfort cooling and condensation prevention in large industrial spaces.

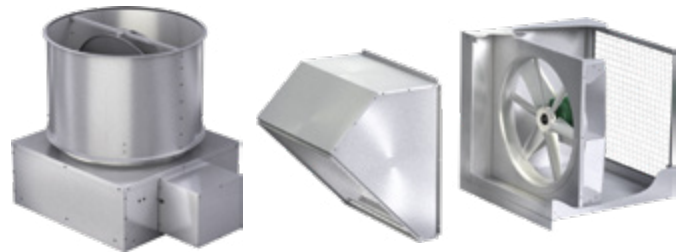

**DEMO** HVLS demonstration highlights plug-and-play installation features, redundant integrated safety features, simplified control options, and performance-based selection software.

## Fans

Greenheck supply and exhaust fans help provide efficient ventilation solutions for warehouse spaces.

**DEMO** Exhaust and supply fan demonstrations showcase energy efficient motor technology and laborsaving factory-provided warehouse accessories.

## Louvers and Dampers

Louvers and dampers complement Greenheck's supply and exhaust fan offering. Industry-leading low pressure drop dampers and louvers to fit any warehouse application.

**DEMO** Multiple operational damper models on display. AMCA certified louver models including stationary, operational, wind-driven rain, and hurricane louvers.

## Make-up Air

Model DGX direct gas-fired make-up air units provide cost effective, highly efficient heating by utilizing 100% outside air and 80/20 recirculating configurations to meet the needs of various building designs.

**DEMO** Demonstrations on forward curved versus mixed flow wheel technology comparing energy efficiency, sound and ease of system balancing.

**Make sure Greenheck's traveling HVAC University doesn't pass you by!**
