SUBJECT: Electric Duct Heater – Model IDHE

Our line of electric duct heaters has grown with the introduction of model IDHE. Model IDHE is the industry's first electric duct heater UL listed for multiple position mounting and universal airflow. This allows the control cabinet to be installed on either side of a horizontal duct or in any orientation on a vertical duct. There's no more need to determine the mounting orientation and control box offset prior to ordering the heater. One model. Any direction!
