

Bulletin: 21-18

TO: All Greenheck Representatives  
FROM: Eric Drengler  
Product Manager, CVI Fans  
DATE: April 2018  
SUBJECT: Mixed Flow, Model EQD and EQB Catalog

We are pleased to provide you with an updated catalog incorporating Greenheck's new model EQD featuring a mixed flow aluminum wheel and a Vari-Green® electronically-commutated motor mounted inside a patent pending octagonal housing. The Vari-Green motor's variable speed control allows the fan performance to match facility demand and requires virtually no maintenance. The EQD is ideal for indoor, commercial clean air applications where quiet, economical operation is desired such as office buildings, educational facilities, hospitals, manufacturing facilities and multifamily housing.

Features include standard universal mounting supports, field-rotatable housing, and removable duct collars for easy installation.

Model EQD is available in three sizes and offers a performance range up to 4,250 cfm and static pressure up to 2.5 in. wg. The enclosed updated catalog includes dimensional, performance and mounting configuration details. The EQD is available on our Quick Build program in 10, 15 or 25 days.

For more information on model EQD, visit [greenheck.com](http://greenheck.com) or contact the Centrifugal and Vane Axial customer support team at [cvifans@greenheck.com](mailto:cvifans@greenheck.com) or 888-284-3306.
