SUBJECT: New High Volume, Low Speed Fan Offering - Model DS

Greenheck is pleased to introduce model DS, **the industry's first and only AMCA certified direct drive high volume, low speed (HVLS) ceiling fan**. Model DS is the ideal selection for providing year-round comfort in air circulation and thermal destratification applications.

Featuring an aerodynamic, extruded aluminum airfoil blade design with diameter sizes up to 24-feet, model DS delivers maximum airflow at a fraction of the operating cost of other HVLS fans. The fan's universal ceiling mount and plug-and-play design make it the market's easiest HVLS fan to install!

Designed with safety in mind, each DS fan includes heavy-duty, redundant safety systems on all critical components. In addition, each DS fan includes a minimum 10-year warranty and is factory tested.

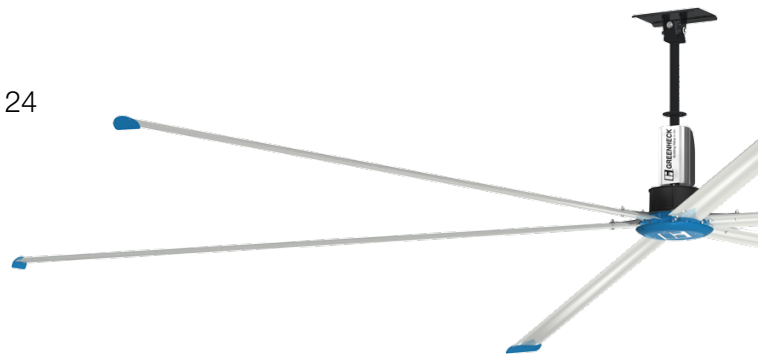

Eight sizes are available with AMCA licensed air performance up to 243,000 cfm. Look for further expansion of the DS model in future CAPS releases.

Sizes: 8, 10, 12, 14, 16, 18, 20, 24

Performance: Up to 243,000 cfm

Standard Features:

- High efficiency, direct drive motor
- Factory-mounted and wired VFD
- CFD-optimized airfoil design
- Redundant safety systems
- Two standard color schemes
- 3.5 ft. downtube with universal ceiling mount
- 3 ft. factory-wired power cable with plug
- Keypad control with LCD display
- 50 ft. of CAT-5e control cable
- 10-year warranty

Certified data may be found in Greenheck's Computer Aided Product Selection Program (CAPS).
