SUBJECT: Model SP and CSP – Vari-Green Expansion

Model SP and CSP Vari-Green® Expansion

Greenheck has expanded the Vari-Green® motor offering for models SP and CSP. With the release of the SP-A700 and 1050-VG and CSP-A700 and 1050-VG, Greenheck continues to enhance our energy efficient offerings. This expansion increases the performance range of electronically commutated (EC) motors for the SP ceiling fan and CSP light-duty commercial inline fan product line by up to **64%**.

Benefits of the new sizes include:

- Improved energy efficiency – up to **33%** more efficient than standard PSC motors
- Sound levels as low as **<0.3 sones** on CSP inline fans
- Compatibility with all Vari-Green controls
- Tri-voltage motors (115/208-230/277V) as standard, for increased installation flexibility
- Available through the  **Quick Delivery** program

 **VARI-GREEN**
Motor

These enhancements allow for more controllability, better efficiency and provide easy selection in CAPS®, while improving the overall competitiveness of our product line.
