SUBJECT: Model SP and CSP – Vari-Green® Expansion

## Model SP and CSP Vari-Green® Expansion

We are excited to announce the continued expansion of the Vari-Green motor offering for models SP and CSP. The release of the SP-A390-VG and CSP-A390-VG expands Greenheck's energy efficient portfolio and provides an improved selection range of our light-duty commercial SP ceiling and CSP inline product line.

Benefits of the new size include:

- Constant torque motor programming for improved performance under increased static pressure
- Sound levels as low as **<0.3 sonas – a 72% reduction**
- Compatibility with all Vari-Green controls for easy airflow control
- Tri-voltage motors (115/208-230/277V) as standard, for increased installation flexibility
- Improved energy efficiency – up to **33%** more efficient than standard PSC motors
- Smaller footprint and lower weight than existing Vari-Green SP and CSP option allowing for easy installation in space constrained applications
- Model CSP-A390-VG is Energy Star Certified

These enhancements allow for more controllability, better efficiency, and provide easy selection in CAPS®, while improving the overall competitiveness of our product line.
