

Bulletin: 69-21

TO: All Greenheck Representatives
FROM: Dan Jore, Application Engineer, Sr.,
Fume Exhaust and Tubular Inline
DATE: December 6, 2021
SUBJECT: Vektor® M Series ERS Coil Coating Change

Greenheck Vektor® M Series models with coil loop energy recovery system (ERS) in sizes 020, 030, 040 and 060 are receiving an upgrade to the coil coating. Heresite was the standard coating on ERS coils. We are replacing that coating with Aqua Aero (AA) coating. The new AA coating has several advantages:

- Excellent corrosion resistance in harsh chemical and processing environments
- Water-based and more environmentally friendly with low VOCs
- Includes anti-microbial properties
- Improved coil delivery lead-time

This coating change will take effect for all Vektor-M ERS orders entered December 2021 and beyond. If you have a Vektor-M Series ERS system that requires the former Heresite coating, please contact the Vektor customer service team (vektor.support@greenheck.com) and we will assist in ensuring the proper coating is applied.

The Vektor C Series ERS systems and compact M Series (sizes 05, 08, 15) ERS units will continue to use E-Coat Epoxy coil coating.
