

Bulletin: 01-22

TO: Greenheck Mechanical Representatives  
FROM: Scott Laurila, General Manager,  
Tempered Air Products  
DATE: January 10, 2022  
SUBJECT: Obsolescence of Models MSCF, LFC and VFC

Models MSCF, LFC, and VFC indoor air handling products have been manufactured by Greenheck for the past 20 years. However, the industry has evolved beyond the capabilities and features of this product line. As a result, we will discontinue these models beginning in the next CAPS® release to focus on products that address today's marketplace. The future for tempered air products (TAP) is filled with excitement as we align our products with market needs and provide our sales partners with innovative solutions.

Models MSCF, LFC, and VFC remain selectable until the release of CAPS 4.38 on April 4, 2022. No new selections will be allowed after this release. No new orders will be accepted for MSCF, LFC, and VFC models after the August release of CAPS 4.39.

If you have any questions on current jobs with MSCF, LFC, or VFC units, please contact our team at [tap@greenheck.com](mailto:tap@greenheck.com).
