DATE: January 31, 2022
SUBJECT: New Residential Energy Recovery Ventilators

Greenheck is excited to announce the launch of new residential energy recovery ventilators. This new product line further solidifies our commitment to giving you the products you need to be successful in multifamily construction.

Multifamily building codes are driving to higher efficiency, balanced, unitized ventilation requirements. Greenheck's new product lineup gives you another tool to help your customer meet code and exceed their expectations.

We will launch four sizes with the April CAPS® release that will effectively meet all multifamily requirements. The four models are detailed below:

- ASSURE120™ – 50 to 130 cfm, Compact Energy Recovery Ventilator
- SYNC110™ – 50 to 130 cfm, EC Motor, Compact Energy Recovery Ventilator
- SYNC180™ – 75 to 200 cfm, EC motor, Cold-Weather Certified, Precision-Balance Enabled Energy Recovery Ventilator
- SYNC270™ - 75 to 280 cfm, EC motor, Cold-Weather Certified, Precision-Balance Enabled Energy Recovery Ventilator

We are also launching an innovative PrecisionSYNC™ control that makes balancing and commissioning easy and intuitive. When paired with the SYNC180 and SYNC270 units, this control measures the maximum airflow capacity of the installation enabling the installer to dial in precise airflow to meet design and code requirements.

When coupled with our high-performance, industry-leading MasterSPEC™ and MultiSPEC™ product lines; and our other air movement, control and conditioning equipment, Greenheck has the most comprehensive high-performance multifamily ventilation package in the industry.

Additional information about the new ERV product line will be available in the coming weeks.
