SUBJECT: Award-Winning AMPLIFY™ with Northern Light®

## **AMPLIFY™ with Northern Light® Wins 2022 Commercial Comfort Product of the Year Award!**

Greenheck's AMPLIFY™ Overhead Fan with Northern Light® Technology earned the *Engineered Systems'* 2022 Commercial Comfort Product of the Year award in the IAQ & Ventilation category. Established to honor excellence in HVACR product design, the contest is conducted annually by *Engineered Systems* magazine which reaches over 43,000 facility and consulting engineers who design, specify, install, maintain and purchase nonresidential HVACR equipment for the commercial, industrial, and institutional building markets.

[AMPLIFY™ with Northern Light®](#) is an overhead fan designed to boost occupant comfort, improve IAQ, and mitigate the spread of airborne pathogens (including the virus that causes COVID-19) in commercial and industrial buildings. Featuring powerful, non-ozone generating UV-C bulbs installed inside the fan blades, AMPLIFY with Northern Light's patented design combines the air-cleaning benefit of upper-room ultraviolet germicidal irradiation (UVGI) with the air circulation capabilities of an overhead fan. The result is a unique system that is more effective than traditional air-cleaning technologies at disinfecting and distributing clean air in large, occupied spaces such as school gymnasiums, warehouses, and more.
