

BULLETIN

MARCH 18, 2024 | BULLETIN 12-24

TO: All Greenheck Representatives
FROM: Kayleigh Frieders
Application Engineering Specialist, Louvers
SUBJECT: New Wind-Driven Rain FEMA Louver, AFL-601

We remain committed to providing you with the products you need to succeed in your market, and we are pleased to announce the addition of our new AFL-601 wind-driven rain FEMA louver.

Your feedback helped us recognize the need for a FEMA 361 louver that not only meets all structural criteria but also provides exceptional wind-driven rain protection. We recognized that select competitors offer FEMA 361 louvers with certified wind-driven performance, however, none of them offer exceptional wind-driven rain performance.

The newly developed AFL-601 is ideally suited for FEMA tornado-safe rooms and storm shelters. Please reference the [AFL-601 static submittal](#) where you can find all product specifications and exceptional performance. The AFL-601 has superior free area and AMCA 500-L Wind-Driven Rain performance to competitor-like products while also being the only product in its class to have the AMCA 550 High-Velocity Wind-Driven Rain Listing making it suitable for applications in the Hurricane-Prone Region or any location where maximum protection against wind-driven rain is preferred.

AFL-601 is available in the April CAPS® 4.44 release.

Please contact the louver team at louvers@greenheck.com or 800-373-4866 with any questions.
