

Fan, Damper and Louver Fundamentals

Greenheck is offering virtual training for our popular Fan, Damper and Louver Fundamentals course.

The class will be held June 28 – July 1 with three hours of virtual class time per day.

The Fan, Damper and Louver Fundamentals course is designed for those new to industry and inside sales representatives. It covers:

- Basic axial and centrifugal fan characteristics, operation, and application
- An overview of power roof ventilators, inline and ceiling fans along with common accessories
- Review of damper and louver products and applications
- Hands-on sessions on CAPS®, Greenheck.com, the My Account portal on Greenheck.com, and Greenheck's parts platform

Successful completion of this course familiarizes students with products that make up over 50% of Greenheck's core business and improves students' efficiency with Greenheck systems.

Class size is limited to the first 25 individuals that sign up.

Email Jenna Munz at EduCentSem@greenheck.com to register for the course.
